## **For Immediate Release**

### **Evergreen Oil, Inc. Announces Opening of New Waste Water Treatment Plant**

Evergreen Oil, Inc. is pleased to announce the opening of our new waste water treatment plant in Newark, California. This plant is capable of accepting all non-hazardous, 22 types of State regulated and 31 types of RCRA listed waste water. Waste water can be accepted and processed with a maximum pumpable solid content of 65% by volume. The plant will accept and treat up to 150,000 gallons per day, and 55,000,000 million gallons annually.

The new system utilizes mechanical solid separation, a lamella clarifier, dissolved air flotation units, pH precipitation and neutralization, and a mixed media filtration unit. All water is batched released under a permit with the local sanitary district.

Evergreen Oil, Inc., a California, USA based corporation, is a leader in the collection, handling and recycling of automotive and industrial wastes through our state-of-the-art, full service, Part B hazardous waste facility. It owns and operates the only re-refinery for used oil in the Western United States, turning the used oil into premium hydro treated lubricating oil that can be utilized for automotive and industrial applications.

For ordering a profile to have your waste accepted, or to have a field service representative contact you to provide a presentation on our other services please contact Evergreen Oil, Inc. at 800-596-9455.
